Course Registration (Coursera/Udemy)

Firstly a user needs to log in via his/her account. In case they don't have an account, create an account with details asked & then verify it through email or phone verification.

Further verification once you have logged in, redirected to the page where we find a list of courses according to categories like - Data Science, Math & Logic etc. You will be redirected to courses offered. Most popular universities, top rated courses & so on. Also we can filter by language, duration, free/period etc.

Then, one can open sources courses info page by clicking on course title & click enroll option. If you find that to unenroll a course, you can do it anytime.

Lastly read all instructions & follow any prompts that are received.

Task 1: Checking Availability of courses

The new courses released are notified via registered email account & also the user can visit the website on regular basis. If the courses are not currently available, a message is displayed either "shortly coming" or "course not available".

Test 1 : Check Availability

Input :

- i) Search for required course
- ii) Set the filter according to your performance

Tests :

- i) Test whether the user entered course is currently available.
- ii) Test the filter cases such as selected language, university.

Outputs :

Message is displayed like "Currently course is not available" or the user is redirected to the course page.
